Vijayawada ,Tadepalli

SKILLS

- Application & Systems Engineering – Scalable architectures, distributed systems, cross-platform solutions
- Artificial Intelligence & Machine Learning – Deep learning frameworks, semantic modeling, adaptive NLP systems
- Cybersecurity Engineering – Threat intelligence, adversarial testing, secure infrastructure design
- Blockchain & Web3 Technologies – Smart contract ecosystems, decentralized frameworks, cryptographic protocols
- Cloud-Native Computing – Multi-cloud orchestration, containerized environments, serverless deployments
- Data Science & Analytics – Predictive intelligence, large-scale data processing, decision-driven insights
- Techno-Business Strategy – Digital transformation roadmaps, innovation frameworks, product lifecycle optimization

PORTFOLIO

PROFILE

A technically driven professional with expertise across AI, cybersecurity, blockchain, cloud computing, and data science. Skilled in designing scalable systems, building intelligent applications, and integrating emerging technologies. Known for bridging technical depth with business impact, enabling innovation and real-world problem solving.

EXPERIENCE

Research Programmer | Gold Light Technologies Pvt Ltd.

- Engineered and developed an end-to-end AI system for flood assessment and a hypothetical cancer detection system, each designed to transform raw imagery into actionable intelligence for different domains.
- Trained a deep learning model using PyTorch to perform precise, pixel-level semantic segmentation on both aerial/satellite imagery for flood mapping and medical scans for identifying cancerous growths.
- Implemented a reasoning and summarization module that converts the technical output of the AI models into human-readable reports and actionable recommendations.
- Designed a scalable and modular architecture with separate frontend, backend, and model layers, ensuring that both systems are robust, maintainable, and adaptable to future improvements.
- Utilized containerization with Docker to ensure the portability and consistent performance of both applications, streamlining the deployment process from development to real-world use.

EDUCATION

KL UNIVERSITY

2022 - 2026

Bachelor of Technology

Pursuing a Bachelor of Technology at KL University with a strong focus on Practical problem-solving and emerging tech. Actively exploring in AI,Cybersecurity, working on real-world projects, and staying ahead of industry trends. Passionate about turning ideas into scalable solutions.

KL UNIVERSITY

2023 - 2026

Bachelor of Business Administration

Motivated BBA student with a strong foundation in strategic management, marketing, and financial analysis. Eager to contribute to business growth through data-driven decision-making and hands-on execution. Known for being dependable, hardworking, and quick to learn. Actively involved in practical projects that apply business theory to real-world challenges.

GLOBAL CERTIFICATION

- AI Associate, Salesforce Certified - October 2024
- Multicloud Network Associate, Aviatrix - January 2025
- Certified Essential Automation Professional, Automation Anywhere - July 2025
